Protection of Metallic Surfaces & Tankcoating Application Services

**General Shipping S.A.**

can undertake a broad range of maintenance projects such as Gritblasting, Painting, Hydroblasting, Gas-Free cleaning and Scaffolding Our Company provides services:

**24 Hours a Day, 7 Days a Week, 365 Days a Year**

# Protection of metallic surfaces Tankcoating application services

Quality & Reliability

**PRIZE AWARD**  
for excellent export activity  
Piraeus Chamber of SME's

Since its establishment in 1971, **General Shipping S.A.** has built a solid reputation in corrosion control know-how.

General Shipping can undertake a broad range of maintenance projects such as grit blasting, painting, hydro blasting, gas-free cleaning, scaffolding etc. Maintenance projects are carried out at all vessel parts and in accordance with international standards. The Protection of metallic surfaces and Tankcoating application services of General Shipping have been certified by ABS with ISO 9001-2015, ISO 14001:2005 and ISO 45001 :2018 standards.

Our well skilled technicians have successfully completed a broad range of tankcoating jobs, ensuring quality service and cost efficiency at all times.

For almost 50 years, General Shipping has serviced and repaired ships for both domestic and international companies. Many congratulatory letters from these companies, serve as testimonials to General Shipping and its qualified staff.

# Protection of metallic surfaces

## Facilities & Mechanical Equipment

The General Shipping tank coating station is based in Piraeus a perfect location for tank coating jobs, with an ideal climate in the Mediterranean area.

## EQUIPMENT

**General Shipping** uses the most up-to-date technology and equipment in tank coating jobs:

- Dehumidifying equipment maintains optimal, controlled climatic conditions in the tanks.
- Dust collector units ensure respect for the environment and provide high health standards in the workplace.
- Overall, optimum tank coating equipment results in high productivity, efficiency and high quality standards.

## SCAFFOLDING

Modern scaffolding is important to successful tank coating and ensures fast and effective results. Our scaffolding provides easy access to all surfaces for either blasting or coating and is designed to allow thorough cleaning and proper ventilation of the tanks.

General Shipping scaffolding meets all EU standards and regulatory requirements.

# Protection of metallic surfaces

## Cargo Tank Coating

**General Shipping** has a history of corrosion control experience. This in-depth knowledge is the key to General Shipping's success, in meeting the challenging demands of tank coating product and chemical carriers, every time.

Stripe coatings are essential to areas that may not be adequately covered by airless spray application. Stripe coating is a first priority, as the majority of coating failures occur in these areas.

The tank is cleaned with a vacuum cleaner to ensure that the surface and staging are free from grit and dust.

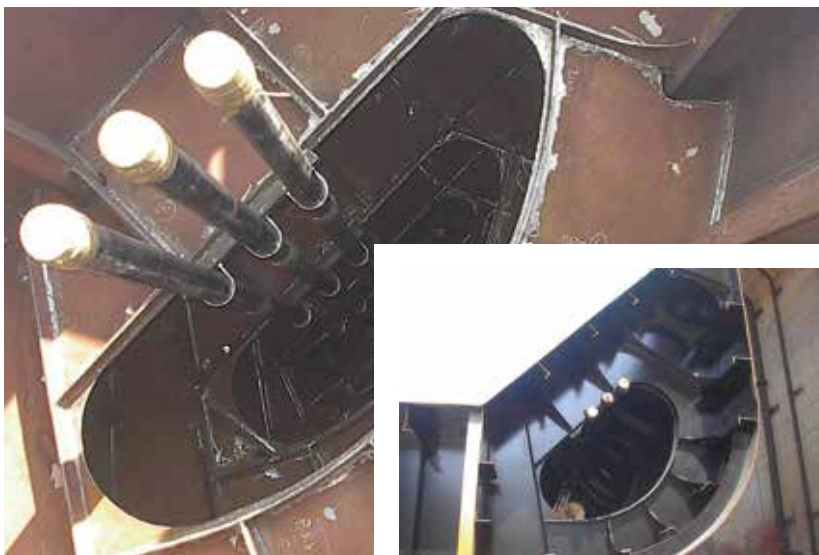

Every step in the tank coating process, from steel surface preparation to final drying or curing, is monitored to ensure conformity to specified standards.

# Protection of metallic surfaces

## Ballast Tank Coating

The quality and longevity of coatings depend primarily on the treatment of steel surfaces and on the prevailing conditions during the application.

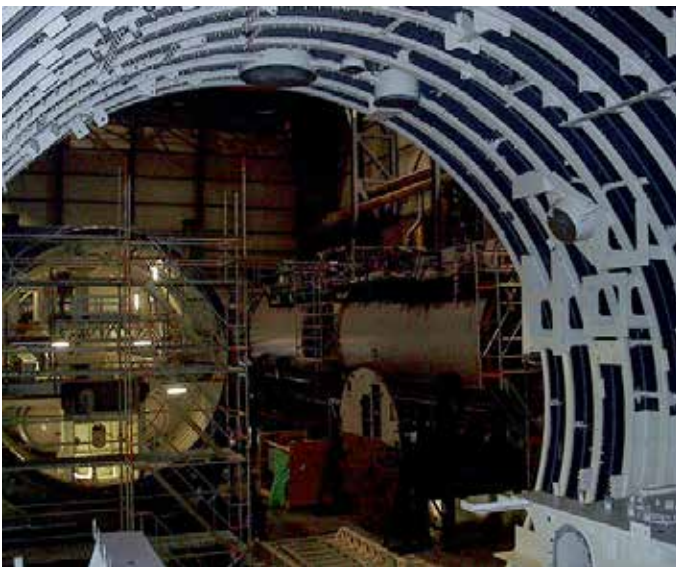

Ballast tanks, oil cargo tanks and holds of bulk carriers or OBOs are known to be most susceptible to corrosion and are thus of prime concern. General Shipping's treatment and coating quality provide long term protection on all surface areas of cargo holds.

## Naval Defence Projects - Submarines

A highlight in **General Shipping's** recent development is the upgrading projects it has implemented for the Hellenic Navy. Projects such as landing ships, floating docks and gun boats at Elefsis Shipyards and Hellenic Shipyards, to name just a few.

All surface treatment projects performed on new technology submarines and upgrades (Programs NEPTUNE I & II, executed by ThyssenKrupp/H.D.W.), were performed by General Shipping S.A. to the full satisfaction of the Hellenic Navy and Shipyards quality control.
